

3M™ FASARA™ GLASS FINISHES

Decorative Film — Product Guide

Guardian Bastille installs 3M's Fasara decorative glass finish collection for offices, storefronts, conference rooms, and interior partitions — adding privacy, branding, and design without the cost of etched or specialty glass. Fasara film blocks approximately 99% of UVA/UVB rays. Patterns below are representative examples summarized from 3M's published product literature.

Dusted Crystal

- Sandblasted-glass look (approx. 85% visible light transmission) that adds privacy while keeping the space bright.

Frosted Crystal

- Etched-glass appearance (approx. 72% visible light transmission) for a softer, more opaque look.

San Marino

- More opaque finish (approx. 21% visible light transmission) for higher-privacy applications.

Milano / Milky Crystal

- Highly opaque finish (approx. 19% visible light transmission) for maximum daytime privacy.

Additional Patterns

- 3M's Fasara collection includes dozens of additional patterns and textures beyond those listed here — ask Guardian Bastille for the full sample book.

Summarized from 3M published product literature (3m.com and 3M Fasara collection materials).

Warranty terms for decorative film vary by pattern and application — contact Guardian Bastille for warranty details specific to your selected Fasara pattern. This document does not represent 3M certification of any project.
